

FUZION

beyond expectation

WOOD FLOOR CARE

IMPORTANT HUMIDITY CONTROL

Wood flooring is a product of Mother Nature and will absorb excessive moisture under humid conditions and release moisture under excessive dry conditions. Although, **FUZION FLOORING** is constructed to withstand the changes in humidity fluctuations it is a natural product and proper observance to relative humidity conditions (RH levels) should be observed. Relative humidity in the home should be kept year around at a minimum of 35% to a maximum of 60% with an average of about 45%. The 45% Relative Humidity level should be maintained as consistently as possible within this range throughout the year. This Relative humidity will create both a comfortable and healthy environment for you and your floor.

“ALL WOOD FLOORING EXPANDS IN THE HUMID WEATHER AND SHRINKS IN THE UNDER DRY CONDITIONS”.

For your protection we strongly recommend the use of both a dehumidifier and a humidifier system at the appropriate times of the year. Manufacturers of hardwood flooring cannot be responsible for installations where either excessive humid or excessively dry conditions exist.

When the furnace or other heating systems are off!

During this period in later spring, summer and early fall; we strongly recommend the use of a dehumidifier. Not protecting your floor from excessive humidity could result in expansion and thereby cause damage to your floor.

When the furnace or other heating systems are on!

During the period in late fall, winter and early spring, we strongly recommend the use of a humidifier system. It will not only protect your health, a humidifier system will also provide moisture in the air to help the possible problem of shrinking (cracks between the boards or other damage to your floor).

Discoloration!

Although, our products are all UV cured and resistant to fading, light colors will show more discolorations than dark stained colours.

Specific Species such as; American Cherry, Brazilian Cherry and other Exotics will be affected more readily than other species.

Any covered areas should be moved periodically in order to assist in slowing down the aging and blocking the sun light from shining directly on the floor will also help slow down aging. Never expose your floor to direct sunlight as this may adversely damage and /or bleach your floor. Always use proper window light filtering window coverings.

Routine Care!

Clean with a vacuum cleaner, dry dust mop or well rung moist mop. Wipe up spills immediately with well rung out damp cloth and dry wipe area at once. Use only recognized floor cleaning products purchased from specialty floor covering stores such as; the Bona Kemi cleaning system or other similar quality maintenance products purchased from a floor covering specialty store.

Hardwood floors although very durable, are “NOT” SCRATCH PROOF. Dirt and grit will abrade the surface and wear off the finish. Remove daily by sweeping or vacuuming. DO NOT drag or pull furniture and other heavy items across your floor. Use floor protector pads (such as felt pads) on furniture legs.

Follow these few simple rules and your **FUZION Hardwood Floors** will provide both beauty and satisfaction for many years.
